

I'm not robot!

It is designed to allow you to sell multiple brands, geographies, currencies as well as to both B2C and B2B buyers from a single platform. For a list of the advanced capabilities included with Magento Commerce, see Commerce features in our developer documentation. B2B features The B2B module extends all of the features of Magento Commerce to meet the needs of companies who sell directly to other companies, rather than to consumers. It combines the convenience of business-to-consumer commerce with advanced account management, robust inventory control, negotiated pricing, bulk order management, and more. Learn the Basics This section of the guide provides information for the “why, where, and how” questions that most merchants have when first learning to use Magento, as well as resources and reference information. It also functions as a springboard to more advanced topics. If you have used this guide before, you can review the Change Log for information about the latest additions and updates to the guide.
